# Agriculture and the environment

"If there is any one secret of success, it lies in the ability to get the other person's point of view and see things from that person's angle as well as from your own."

## Henry Ford

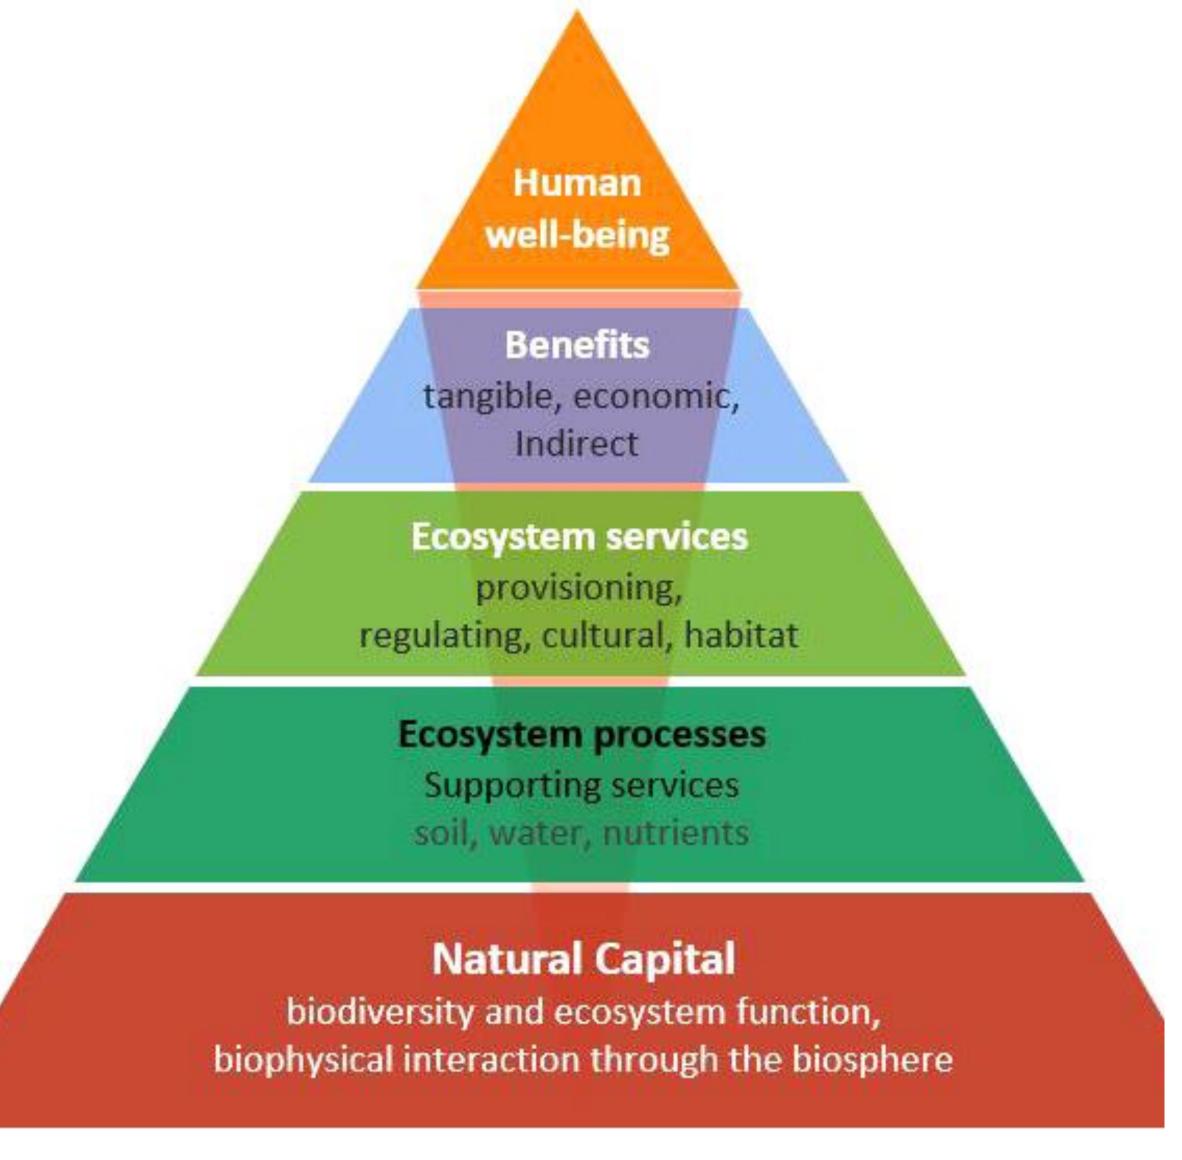

## Biodiversity key for sustainable development

Biodiversity loss: key threats for humanity

Almost half global GDP linked to nature

Restoring biodiversity core part of recovery

# Soil quality

#### **Drivers for action**

- Suboptimum soil pH
- > Loss of carbon stock in organic soils
- Sequestration potential not realised

#### Pressures from agriculture

- > Fertiliser use
- Livestock
- > Land use and land use change
- Drainage
- Structural damage

## Teagasc GHG MACC

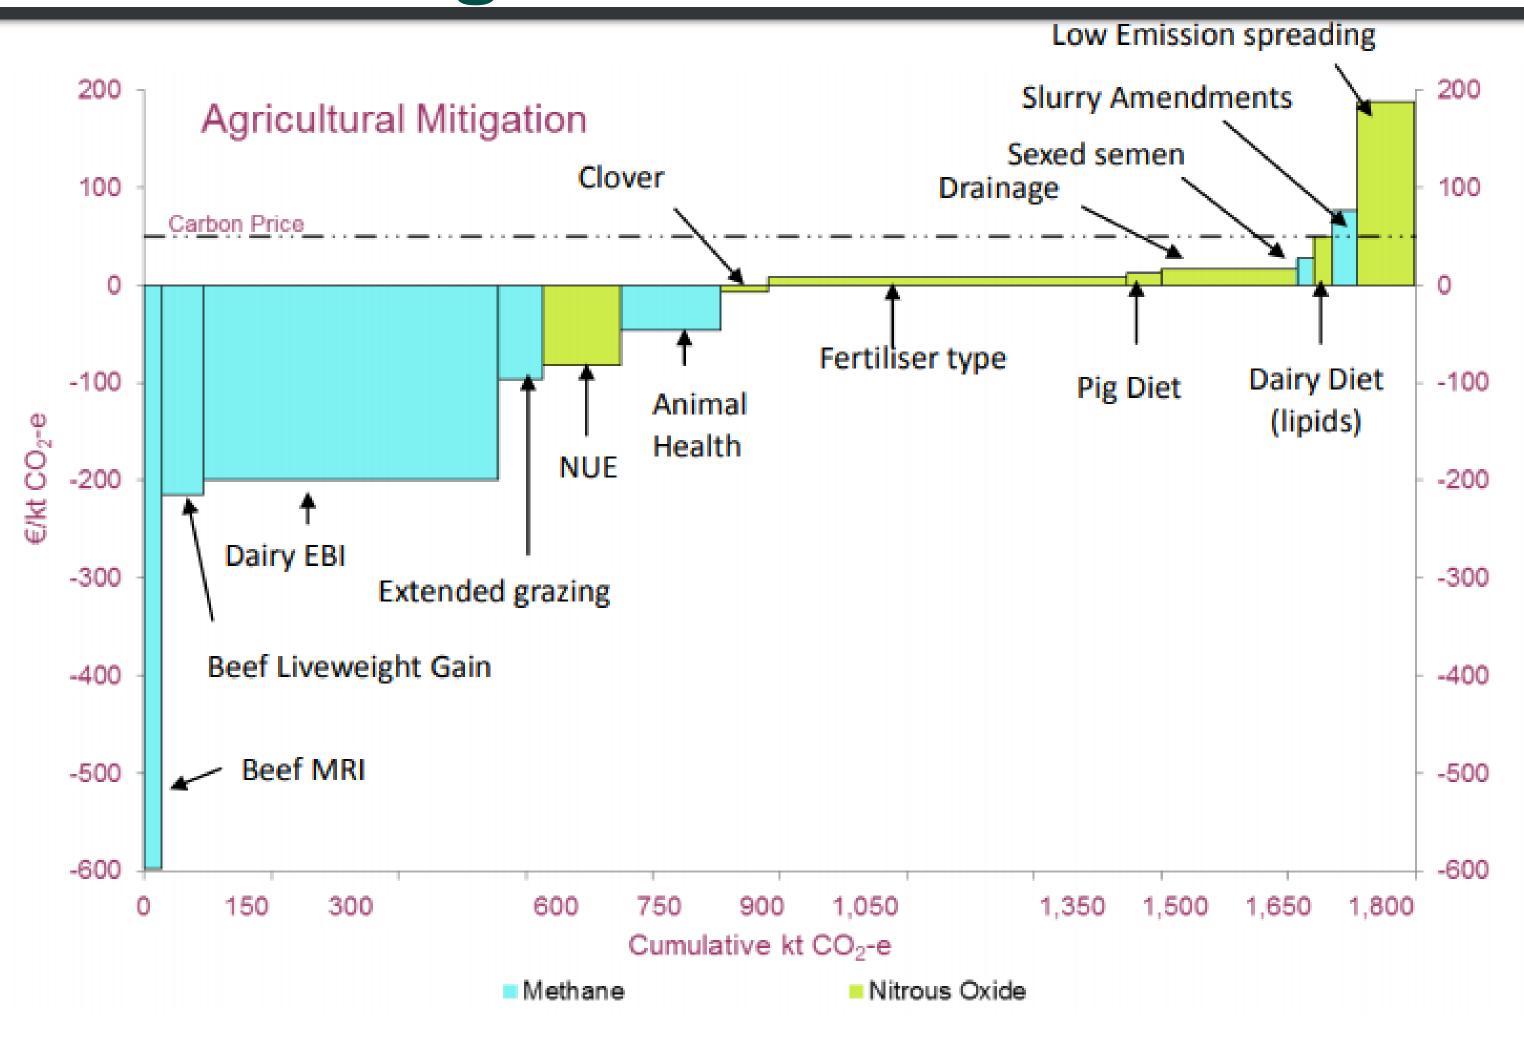

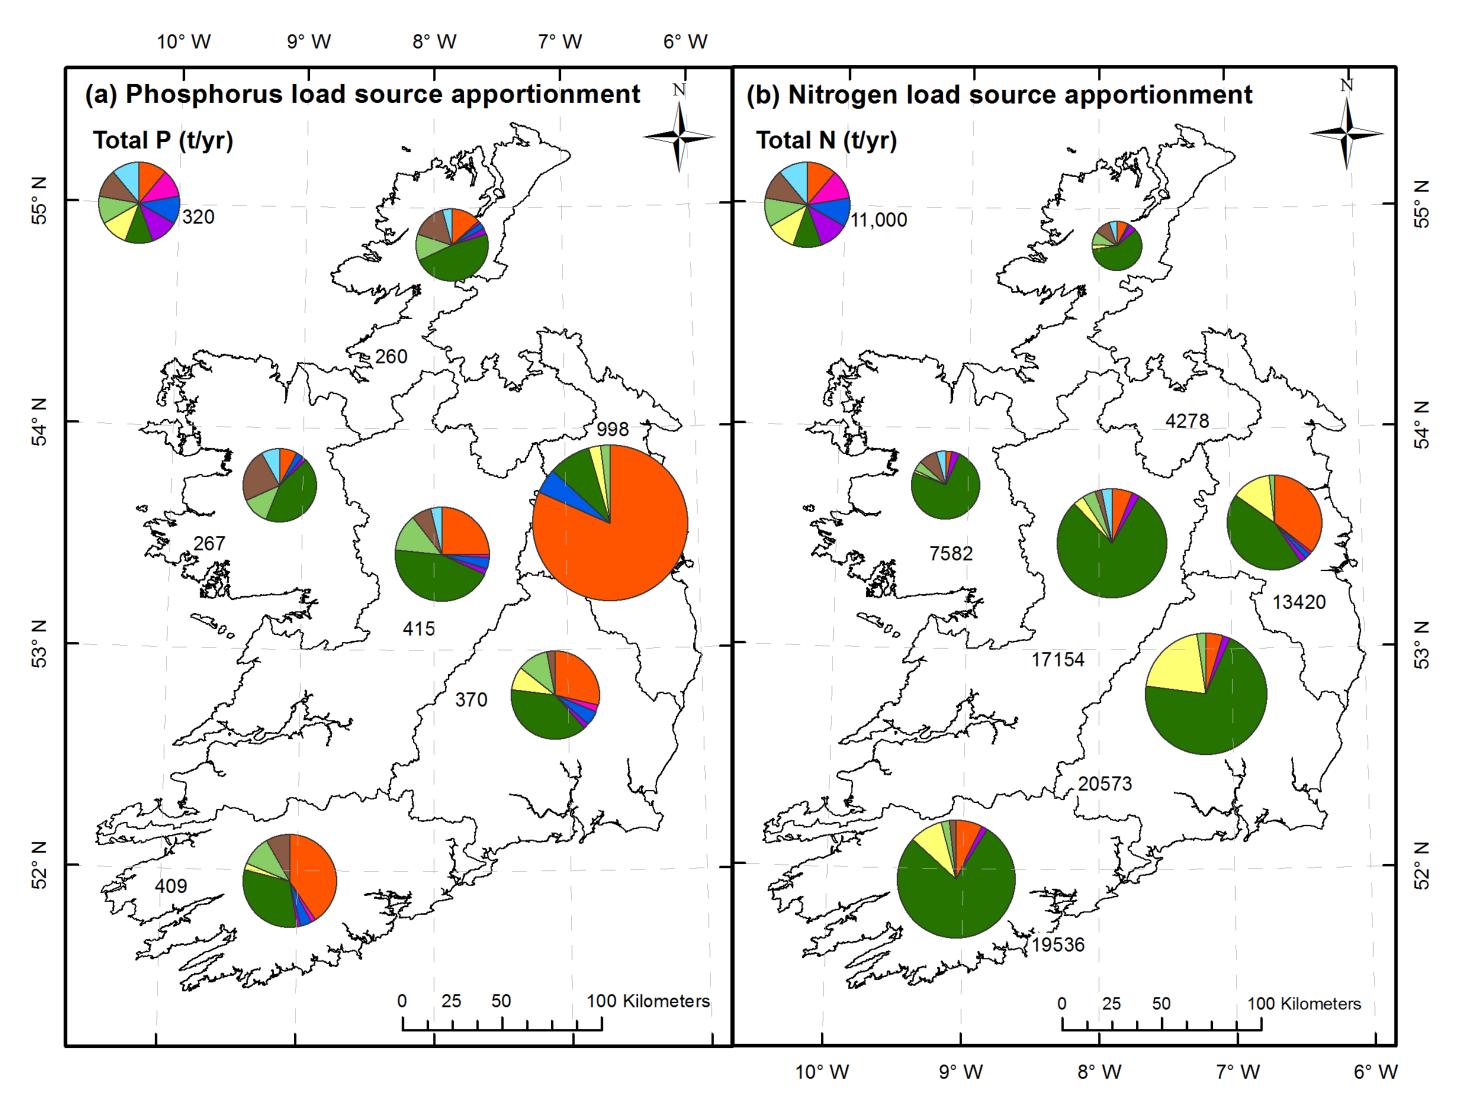

Figure 3.1: Marginal Abatement Cost Curve for agriculture for 2021-2030 (methane and nitrous oxide abatement). Values are based on linear uptake of measures between the years 2021-2030 and represent the mean yearly abatement over this period. Dashed line indicates Carbon cost of €50 per tonne CO₂.

### Phosphorus sources Nitrogen sources

Urban sources of P are large but are most important in the coastal settlement areas. Elsewhere its mainly diffuse agricultural sources

Diffuse agricultural sources of nitrogen are much larger than urban sources

#### Industry structure

Economic size	Very Small	Small	Medium	Large	Very large
Standard Output (SO)	Under €15k	€15k to €25k	€25k to €50k	€50k to €100k	Over €100k

#### Biodiversity

Biodiversity in the Netherlands is declining. Despite all the efforts of NGOs, researchers and land users, plant and animal species are still becoming extinct. Recovery is not going to happen by itself. Therefore it is important that we as a society join forces to stop the loss of biodiversity. Rabobank, together with farmers' organizations, food supply chain partners, land users, consumers, researchers, nature and environmental organizations and (local) governments, is committed to reverse biodiversity loss in the Netherlands and ultimately work toward its recovery. We encourage effective use of natural resources and actively work with customers and partners to conserve and restore biodiversity.

Water

Integrative, adaptive, informed and inclusive governance approaches including smart policy mixes

MULTI-ACTOR
INTERVENTIONS
(LEVERS)

- Incentives and capacity building
- Cross-sectoral cooperation
- Pre-emptive action
- Decision-making in the context of resilience and uncertainty
- Environmental law and implementation

#### LEVERAGE POINTS

- Embrace diverse visions of a good life
- Reduce total consumption and waste
- · Unleash values and action
- Reduce inequalities
- Practice justice and inclusion in conservation
- Internalize externalities and telecouplings
- Ensure environmentally friendly technology, innovation and investment
- Promote education and knowledge generation and sharing

#### NEXUSES

- Feeding humanity without deteriorating nature on land
- Meeting climate goals without incurring massive land-use change and biodiversity loss
- Conserving and restoring nature on land while contributing positively to human quality of life
- Maintaining freshwater for nature and humanity
- Balancing food provision from oceans and coasts with nature conservation
- Resourcing growing cities while maintaining nature that underpins them

"So live as if you were living for the second time and as though you had acted wrongly the first time."

## Victor Frankl
